

Proposed eReserve3 Battery Storage Project

VIRTUAL COMMUNITY OPEN HOUSE

THURSDAY, DECEMBER 3RD, 2020
6:00 PM-8:00 PM (VIA ONLINE AND PHONE)
PRESENTATION AND Q&A
COUNTY OF GRANDE PRAIRIE NO. 1 | CLAIRMONT, AB

WELCOME

We are here to provide information about
the proposed project and answer your
questions.

Introduction

- TERIC Power Ltd. (“TERIC”) is an Alberta-based Independent Power Producer with a business focus on developing specialized portfolios of clean power generation projects.
- In business since 2013, TERIC currently operates in both Alberta and Saskatchewan with several waste-gas to power generation sites, and a number of combined heat and power (CHP) units.

TERIC believes in developing clean energy projects that are economically and environmentally positive.

What is the eReserve3 Battery Storage Project?

Owner Name	TERIC Power Ltd. eReserve3
Location LSD	10 km Northeast of Clairmont, Alberta SE-02-73-05-W6M
Type & Size	20MW/35MWh Battery Storage
Technology	Lithium-ion Cells
Footprint	~5 Acres
Interconnection	Powerline E-W along Twp Rd 730

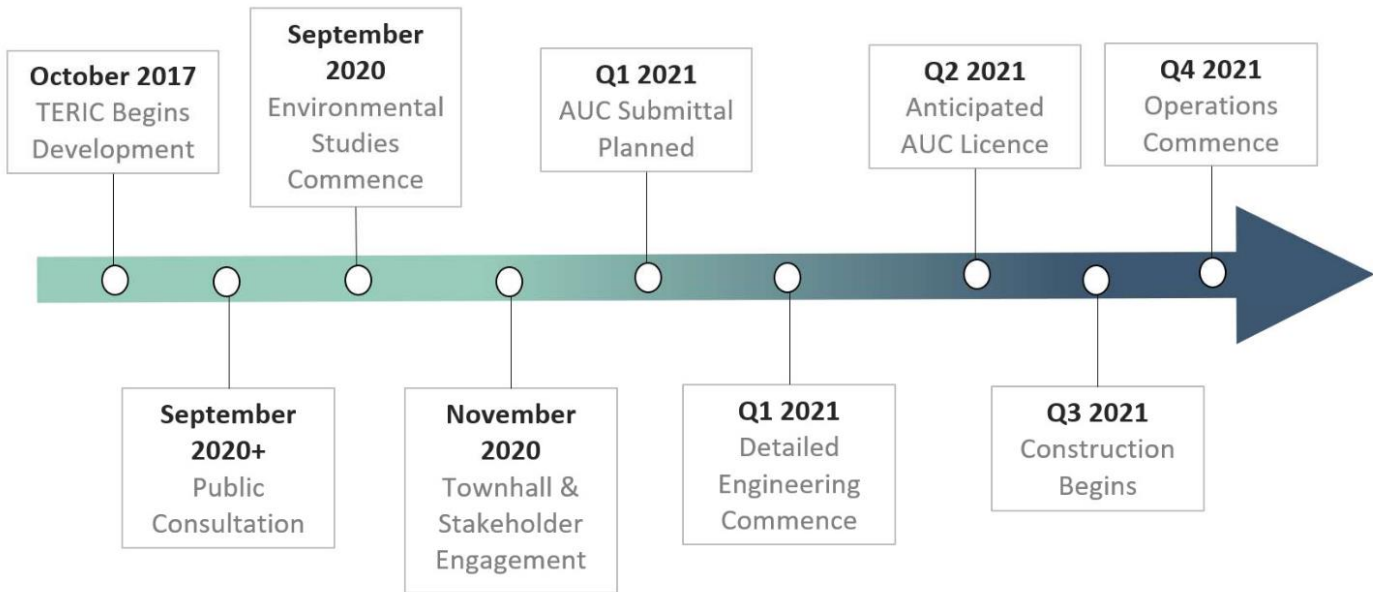

Why Battery Storage?

- As more renewables enter the market, the grid becomes more unstable due to the lack of predictability (wind) and commonality (solar).
- eReserve3 will store grid power, and then return the power as the Alberta Electrical System Operator (AESO) requires, generally in times of high demand.
- Storage projects within Alberta can preclude the need to build additional transmission/distribution lines.

eReserve3 will improve reliability for the Alberta electrical grid.

Project Schedule

Public consultation will continue through the entire lifecycle of the project. TERIC believes in an open, honest, transparent and timely conversation from development through to operations and decommissioning.

* This proposed schedule may be subject to change, given project progress. TERIC commits to update stakeholders in a timely manner for important timeline changes.

Community Benefits

Municipal Tax Revenue

- Project will generate municipal tax revenue that will contribute to the tax base for the County of Grande Prairie No. 1 while requiring minimal municipal services.

Employment

- Construction jobs for electricians, equipment operators, labourers, specialized trades, site managers and engineers.
- On-going site services once the project is operational – project operator, electricians, and vegetation control.

Materials, Supplies and Local Services

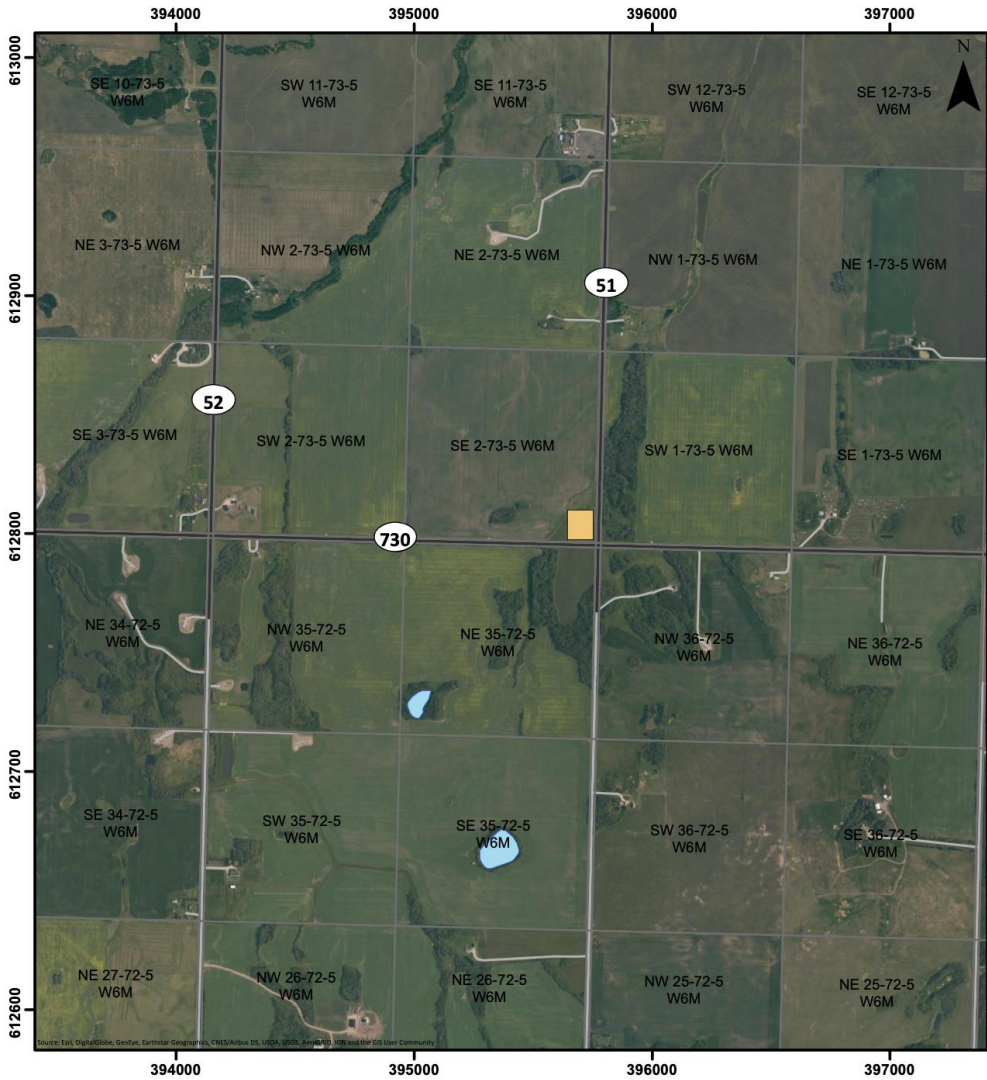

- Procurement of materials, supplies and local support services during the construction and operations phases, such as accommodations and food services for workers where feasible.

Environmental

- A comprehensive environmental assessment was initiated in October 2020, which includes:
 - Pre-disturbance wildlife and habitat studies: general species inventory, sensitive species and habitat features, and migratory birds.
 - No sensitive wildlife ranges come within at least 1000m of the site.
 - Review of environmentally sensitive or protected areas.
 - Vegetation species and communities studies.
 - No wetlands or waterbodies within 100m of the site – one ephemeral drainage within 100m of the site.
 - Terrain and soil review.
 - Groundwater review.
 - Air quality review.
- The data collected through the field studies provide a baseline and confirm that no environmental concerns are identified.
- Consultation was performed with Alberta Environment and Parks (AEP).

Site Map

Project Name:	TERIC Power eReserve 3 Site
Document Title:	19003-SLO-0001 – Public Consultation Map
Scale:	Not to scale
Key:	
	Site Boundary SE 2-73-5 W6M
	Major Road
	Secondary Road
	Waterbody
Coordinate System: NAD 83 UTM Zone 11N	
Client:	TERIC Power Ltd.

Regulatory Approvals

Alberta Utilities Commission (AUC)

- Under Rule 007 – Applications for Power Plants, Substations, Transmission lines, Industrial System designations and Hydro Developments.
- Established and robust stakeholder consultation process.

Alberta Environment and Parks (AEP)

- Environmental, wildlife/wetland studies to be completed in consultation with the AEP.

Alberta Culture and Tourism

- A Historical Resources Impact Assessment (HRIA) was conducted in September 2020, where no historical, archaeological, or paleontological impacts are anticipated for this Project that have a Historical Resource Value.

County of Grande Prairie No.1

- Development and building permits will be applied for before construction.

Stakeholder Consideration

Noise

- A Noise Impact Assessment will be completed to ensure the project is compliant under AUC Rule 012: Noise Control.
- Compliance with municipal rules regarding work-hours during construction period.

Traffic

- During construction, the site will receive a number of semi-sized loads to bring the modular equipment into site, as well as project staff accessing the site with light duty pickup trucks.
- Operation of the facility will not increase local traffic, with TERIC technicians periodically accessing the site from Range Road 51 and Township Road 730.

Visual Impact

- The facility will have a low observable presence from Township Road 730 due to the low height, scale and neutral line of sight positioning. The containerized units and buildings will be painted in a neutral colour.

Safety

- Safety equipment and measures will be installed to mitigate risks such as rupture, explosion, fire, and leakage.
- eReserve3's Emergency Response Plan defines pre-planned procedures in the unlikely event of an emergency. TERIC is working with local area fire and rescue services to review.

Decommission & Reclamation

- Following the Project's lifecycle, TERIC's decommissioning and reclamation plans address activities related to the restoration of any disturbed land to their former use, in compliance with current Alberta regulations.

Grid Scale Battery Technology

- Lithium-ion battery technology is a safe, reliable and proven technology used around the world for the efficient storage of electricity.
- Globally there is over 3,000MW of installed battery storage capacity.
- Lithium-ion makes up 85% of all installed batteries globally.
- TERIC is working with the top-tier global manufacturers of battery storage technology to select the battery equipment for this Project. We will choose a supplier with an established history of installations for battery equipment with considerations for operational efficiency, safety, construction quality, and a proven reliability record.

eReserve3 Project Lifecycle

A Multi-Decade Long Project

- The project is expected to be operational for 20+ years with the original batteries that will be installed.
- During the lifecycle of the Project, the project may be refurbished, which proposes using some of the existing components and replacing/upgrading others, where needed.
- At the end of the project life:
 - Decommissioning will occur. All surface equipment will be recycled or salvaged.
 - All ground infrastructure will be removed, and the land will be returned to the same condition prior to construction as defined by applicable laws, standards and regulations at the time of reclamation.

Questions or Feedback?

- We encourage you to speak to any of the representatives here today for more information on the Project.
- TERIC is committed to sharing all available information about the project and working with members of the public to ensure that stakeholder input and concerns are heard and addressed.
- If you have a comment or question, please contact us below via a phone call or email.
